

Thermal-Motion Detection Software

Thermal imaging greatly increases security effectiveness by detecting and tracking intruders, preventing terrorism before it happens.

Our computer automated detection system, using Infrared, Inc. Thermofind™ software, features motion detection with audio visual remote alarm so that the operator does not have to continuously monitor the system to detect threats. Working in conjunction with Thermatect,™ this one of a kind software package utilizes a unique process to first thermally detect intruders, vehicles, or boats with Thermatect,™ then Thermofind™ tracks the movement on the screen. It is available in customized installation configurations including stand alone and web based intra and internet with various warning system options.

Infrared, Inc. systems are passive and non-intrusive, detecting through pitch-black darkness, in most weather conditions and over long distances. Thermal imagers work day or night and do not require ambient light to see perfectly in the dark. As a result, our systems are invisible to any intruder and allow security personnel to monitor their actions without their knowledge. Our systems let you see things that never would have seen before, protecting people and assets before they are exposed to danger.

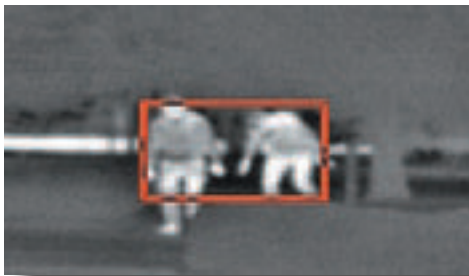

Warning System Options:

- Audio/Visual
- Remote alarm
 - Pager
 - Cell phone
 - E-mail

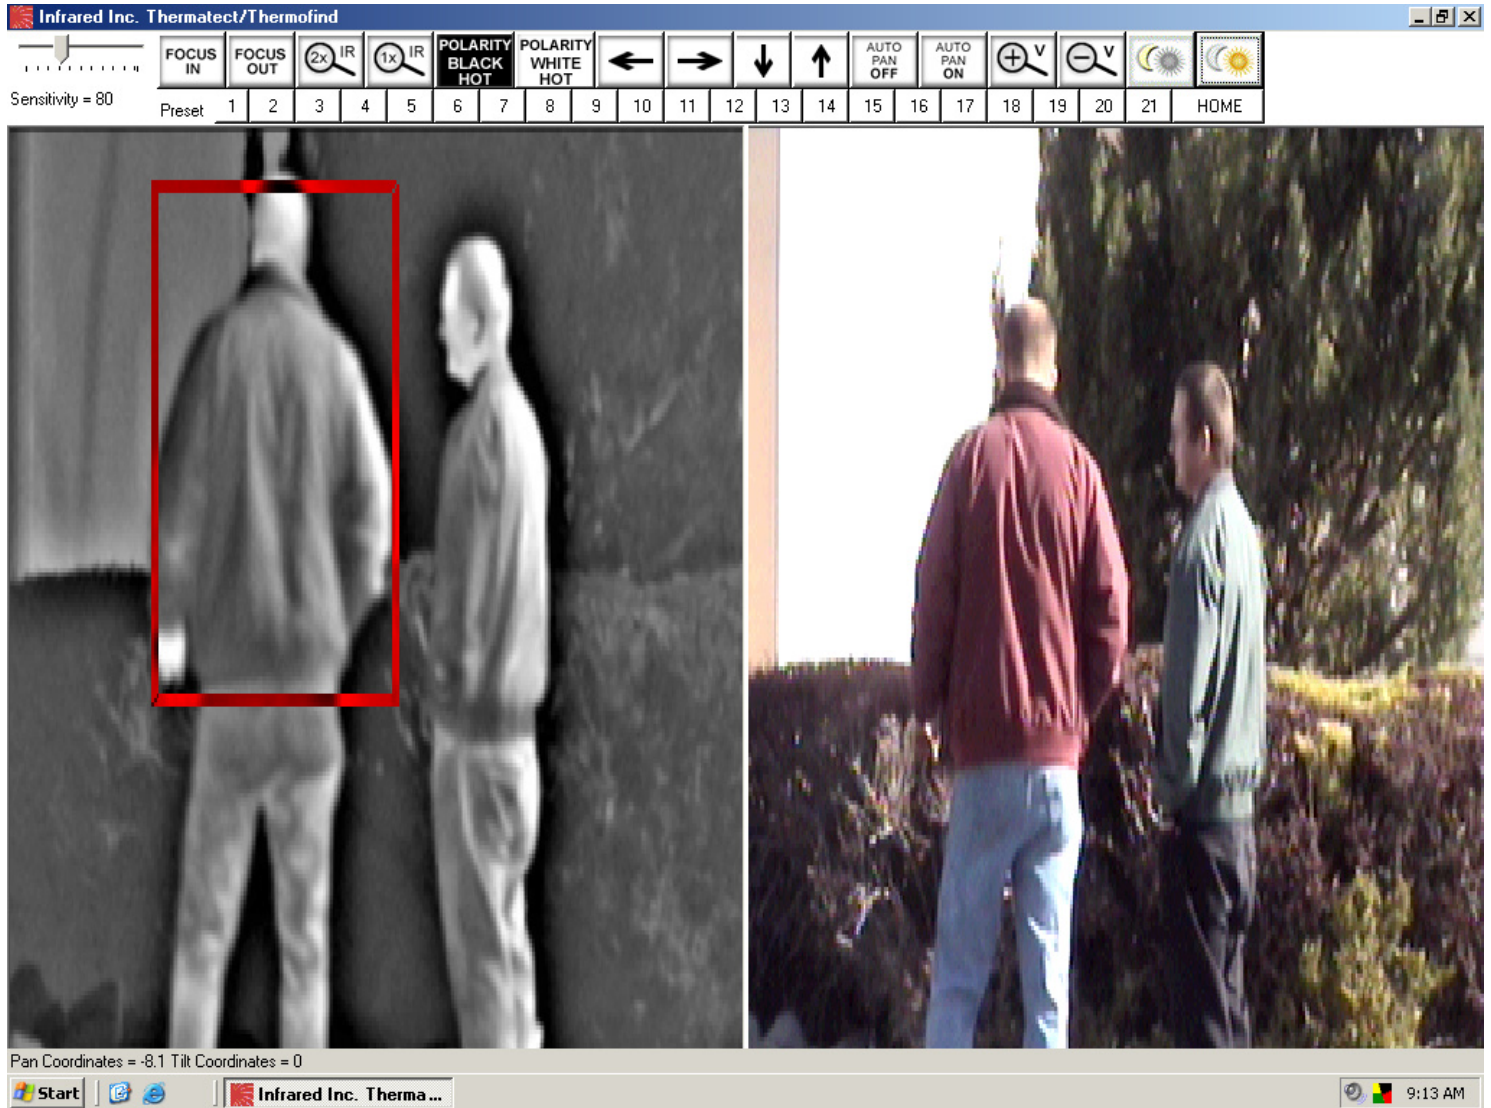

Features:

- Mid and Far wave infrared detectors
- Dual vision systems featuring visual and infrared cameras
 - Pan and Tilt
 - Distance to 12 miles
- Web based Intra and Internet with all operational functions
- Machined all weather environmentally sealed enclosures

Thermofind is a registered trademark of Infrared, Inc.

Our computer automated alarm system, using Infrared, Inc Thermatect™ software features thermal detection with an adjustable sensitivity threshold.

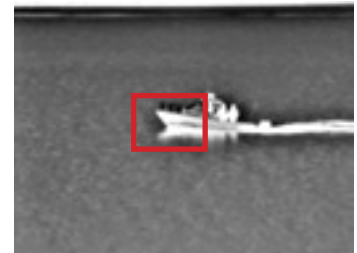

Software Graphical User Interface

Installation configurations:

- Hardwire
- Wireless
- Wireless LAN
- Fibre Optic
- Remote Operations
- Battery Powered Systems
